Lighter and stronger

Visit the Rollon stand to view its new DE series telescopic rails which are 30% lighter than the previous design.

The new design, which features a reduced profile thickness, eliminates excess material while maintaining high rigidity of the telescopic rails. Smooth movement and high performance is guaranteed. The tempered raceways support tens of thousands of cycles even with the maximum applied load (approximately 130kg at the end in full removal position). The new product is also available with an anti-corrosion treatment.

The new lighter rails are particularly suitable for use on first and business class seats for movements of the seat pans, footrests, armrests and pull-out tables where high load capacity and a capability for meeting rough conditions is necessary.

New premium quality carpet
